### Program Learning Outcomes | Chemistry, B.S.

 $1.\,$  Use the structure of atoms and their subatomic particles to explain chemical and physical properties.

- 2. Explain how atoms interact via chemical bonds and the energy changes associated with making and breaking bonds.
- 3. Relate the three dimensional geometric structures of chemical compounds to their chemical and physical behaviors.
- 4. Evaluate how intermolecular forces dictate the physical behavior of matter.
- 5. Categorize and analyze the chemical reactions involved in transforming matter into products with new chemical and physical properties.
- 6. Evaluate the energy changes that accompany chemical reactions.
- 7. Assess the various ways that affect how reaction rates vary with time.
- 8. Analyze the various factors that affect the equilibrium of chemical reactions.
- 9. Perform laboratory experiments that involve collecting and analyzing data and practicing chemical safety.
- 10. Evaluate chemical constructs at the particulate and macroscopic levels using models, graphs to visualize data, and mathematical equations.
- 11. Develop written reports and oral presentations that effectively communicate scientific principles and processes.
